Human – Virus Interaction: Present and Future Perspective

About The Webinar

There are more than two hundred virus spp. that are known to be able to infect human. The 1st of these to be discovered was yellow fever virus in 1901, and three to four new spp. are still being found every year.

Different types of viral diseases are found in human system. Since the discovery of virus Human - Virus interaction have come a long way decoding several critical relationship. The current global pandemic has revealed once again how vulnerable we are as a system against invading viruses. Thus it is very important to understand the dynamic interactions between viruses and human for our survival.

Hope this webinar can provide important thoughts of viral diseases to the participants.
